

# SimpleKey Web

SimpleKey Web is the latest development of the SimpleKey user interface, providing an affordable, reliable method of controlling and monitoring access into residential housing blocks administered using GPRS.

## Features & Benefits

- **GPRS/3G Real Time Communications** now with roaming SIM and signal monitoring, improving coverage and reliability.
- **Area & Group Configuration** simplifies how the system is managed by allowing housing area/estates/user groups etc. to be managed collectively.
- **Pre-programmed Shark Tooth Fobs** enable new or replacement fobs to be simply assigned or reassigned.
- **Universal Search Bar** allows the intuitive management of resident and staff/contractor fobs, with search as you type feature.
- **Activity/Alarm Monitoring** allows user events and system alarms (i.e door forced/left open) to be reported, with the option of predetermined alerts being sent out using email.
- **Fob Usage Reports** includes custom, excessive, unused and expired.
- **Cloud Based Administration** specifically designed for use on smart phones and tablets as well as conventional PCs and laptops.
- **Mapping** with block locations and addresses can be displayed on interactive maps, providing a graphical overview of the system.

## Options

- Many existing KMS or non KMS systems can be upgraded to work on SimpleKey Web, often utilising most of the existing hardware & fobs.
- Additional functions like lift control, door monitoring & integration with fire & safety systems can simply be incorporated.
- Every system brought online to the SimpleKey Web System, is remotely commissioned by KMS ensuring good communications & the installation is functioning correctly to meet the site requirements.
